Joan,

I added the sampling sites in this attached 'v2' version. I did the map 2 ways, with and without NHD unnamed tributaries. They are good in that you see more streams, and occasionally bad in that some of these unnamed tribs have been channelized around crop fields and cranberry fields and this is not reflected in the NHD. That's why you see an occasional stream crossing a field.

I also thought I'd not label the sites as the map would be quite 'busy' at this scale, and instead defer to your zoomed in map.

Milo

This looks good! The only thing it needs is the locations of our sampling. So I can either send you that shapefile, or you can send me the shapefile of fall application fields.

Cheryl, Joan,

Does this map give you the info needed for your site visit?

Milo
